

Introduction

`MyGraph` class provide several functions to manipulate the dot graph. You can run the code by using the example code below.

```
public class Main {  
    public static void main(String[] args) {  
        MyGraph test = new MyGraph();  
        test.parseGraph("demo.dot");  
        test.toString(Boolean.TRUE); // set ifPrint parm to True to print on  
the console  
        test.outputGraphics("demo1.png", "png");  
    }  
}
```

I also provide the unit test in `/src/test/MyGraphTest.java`.
